

Revision Checklist for IGCSE Biology 0610

A guide for students

How to use this guide

The guide describes what you need to know about your IGCSE Biology examination.

It can be used to help you to plan your revision programme for the theory examinations and will explain what the examiners are looking for in the answers you write. It can also be used to help you revise by using the tick boxes in Section 3, 'What you need to know?', to check what you know and which topic areas of Biology you have covered.

The guide contains the following sections:

Section 1: How will you be tested?

This section will give you information about the different types of theory and practical examination Papers that are available.

Section 2: What will you be tested on?

This section describes the areas of knowledge, understanding and skills that you will be tested on.

Section 3: What you need to know

This shows the syllabus content in a simple way so that you can check:

- the topics you need to know about
- how the Extended syllabus (Supplement) differs from the Core syllabus
- details about each topic in the syllabus
- how much of the syllabus you have covered

4. Appendices

This section covers the other things you need to know, including:

- information about the mathematical skills you need
- information about terminology, units and symbols, and the presentation of data
- the importance of the command words the Examiners use in the examination Papers

Not all the information will be relevant to you. For example, you will need to select what you need to know in Sections 1 and 3, by finding out from your teacher which examination Papers you are taking.

Section 1: How will you be tested?

1.1 The examinations you will take

You will be entered for **three** examination Papers, **two** theory Papers and **one** practical Paper.

You will need to ask your teacher which practical Paper you are taking. Nearer the time of the examination, you will also need to ask which theory Papers you are being entered for.

If your teacher thinks that you should enter for the examination based on the Core syllabus, you will take Paper 1 (theory), Paper 2 (theory) and **one** of the practical Papers (4 or 5 or 6).

If your teacher thinks that you should enter for the examination based on the Extended syllabus, you will take Paper 1 (theory), Paper 3 (theory) and **one** of the practical Papers (4 or 5 or 6).

Whether you take Paper 2 or 3 will depend on the progress your teacher thinks you have made and which Paper most suits your particular strengths. You should discuss this with your teacher.

1.2 About the theory Papers

The table gives you information about the theory Papers

<i>Paper number</i>	<i>How long and how many marks?</i>	<i>What's in the paper?</i>	<i>What's the % of the total marks</i>
Paper 1	45 minutes (40 marks)	40 multiple-choice questions. You choose one answer you consider correct from a choice of 4 possible answers.	30%
Paper 2	1 ¼ hours (80 marks)	Short-answer questions and structured questions. You should write your answers in the spaces provided. The Paper tests the Core syllabus.	50% (you do either Paper 2 or Paper 3)
Paper 3	1 ¼ hours (80 marks)	Short-answer questions and structured questions. You should write your answers in the spaces provided. The Paper tests topics in both the Core and Extended syllabus.	50% (you do either Paper 2 or Paper 3)
Practical Paper	see next table	see next table	20%

Total 100%

1.3 About the practical Papers

Twenty percent of the marks for IGCSE Biology are for practical work. Practical work is based only on the Core syllabus.

You will do **one** of the practical Papers shown in the table. Your teacher will tell you which practical Paper you will do. The number of marks varies between the Papers but your final

mark will be calculated so that it is worth same percentage of the total examination as the other practical Papers.

Paper number and type	How long and what it's marked out of?	What's involved?
Paper 4 (coursework)	no fixed time (48 marks)	You design and carry out experiments, which are then marked by your teacher. You will be assessed on 4 skill areas. You need to produce 2 pieces of work for each skill area.
Paper 5 (practical test)	1 ¼ hours (40 marks)	You do a practical exam, which is supervised by a teacher. There are usually 2 questions testing 4 skill areas.
Paper 6 (alternative to practical)	1 hour (60 marks)	You answer a written paper about practical work. There are usually 6 questions, which test the same skill areas as Paper 5.

Here is some more detail about each of the practical Papers. If you are unsure of anything, ask your teacher.

1.3.1 Paper 4 (Coursework)

You will carry out several experiments throughout your Biology course, which will be marked by your teacher. Your teacher will mark you on **four** different skill areas (Using apparatus, Observing, Handling results, Planning and Evaluating.)

What you have to do to get a basic (B), medium (M) or high (H) mark is shown below. The differences between basic, medium and high marks are shown below in italics and underlined.

Skill C1: Using apparatus

You follow written instructions to set up and use apparatus correctly. You carry out your work safely.

B: You follow instructions correctly to do a single practical operation e.g. testing a sample of Food to find out if it contains starch.

You use familiar apparatus with a little help on points of safety.

M: You follow instructions correctly to do a series of step-by-step practical operations e.g.. testing a leaf to find out if it contains starch or investigate the digestion of starch by amylase

You use familiar apparatus fairly well with no help on points of safety.

H: You follow instructions correctly to do a series of step-by-step practical operations, but you may need to change one step if things don't work out as you thought, e.g. lower the concentration of amylase if the digestion of starch goes too fast.

You use familiar apparatus very well with no help on points of safety.

Skill C2: Observing

You make observations and measurements and write them down clearly.

B: You make suitable observations when given some detailed instructions.

You record results correctly when given a detailed table or some help.

M: You make suitable observations when given minimal instructions.

You record results correctly when given an outline table or minimal help.

H: You make suitable observations without help and record results as accurately as the apparatus allows.

You record results correctly without help.

Skill C3: Handling results

You draw graphs and/ or perform calculations from your results. You draw conclusions from your results and recognize any results, which do not fit into the pattern.

B: You draw graphs or charts (or do some calculations) from your results when given detailed suggestions.

You draw simple conclusions from your results.

M: You draw graphs or charts (or do some calculations) from your results when given only a little help.

You draw simple conclusions from your results and comment on the patterns shown by the data e.g. a high concentration of amylase causes a faster rate of reaction than a low concentration.

You comment on results which do not fit the pattern.

H: You draw graphs or charts (or do some calculations) from your results when given no help.

You draw more general conclusions from your results and comment on the patterns, e.g. the greater the concentration of amylase, the faster the reaction. You comment on results which do not fit the pattern and suggest how to deal with them e.g. ignore them.

You suggest what errors there are in your experiment.

Skill C4: Planning and evaluating

You plan your experiment given some basic information from your teacher. You suggest how well your plan worked and modify if necessary.

B: You write a simple plan for your experiment.

You modify your plan after doing several experiments to see which works the best.

M: You write a plan for your experiment, which has a series of logical steps in it.

You modify your plan after doing trial experiments and give reasons why you need to alter your original plan.

If there are two variables (things which can change e.g. concentration of amylase, concentration of starch), you recognise that one variable needs to be changed, while the other is kept the same. e.g. keep the concentration of starch the same but vary the concentration of amylase.

H: You write a plan for your experiment which has a series of logical and clearly reasoned steps.

You modify your plan after doing trial experiments and give reasons why you need to alter your original plan and suggest to what extent your plan works and why. You suggest how to deal with unexpected results.

If there are more than two variables you recognise which need to be controlled (kept constant) and which needs to be changed.

1.3.2 Paper 5 (Practical test)

You do a practical exam, which is supervised by a teacher. You are given an instruction sheet which enables you carry out the experiments, handle the data and draw appropriate conclusions. You may be asked to use the following techniques:

- carefully following a set of instructions in a particular order
- using familiar and unfamiliar methods to record observations and making deductions from them
- performing simple tests, for example tests for food substances, using hydrogencarbonate indicator, litmus and Universal Indicator paper
- using a scalpel or razor blade, forceps, scissors and mounted needles skilfully
- using a hand lens to observe and record biological specimens
- making clear line drawings of specimens
- performing simple arithmetical calculations, including the magnification of a drawing

1.3.3 Paper 6 (Alternative to practical)

This is a written Paper, testing the same four skills as Paper 5. You may be asked to:

- carefully follow a set of instructions in a particular order
- use familiar and unfamiliar methods to record observations and making deductions from them
- perform simple tests, for example tests for food substances, using hydrogencarbonate indicator, litmus and Universal Indicator paper
- use a scalpel or razor blade, forceps, scissors and mounted needles skilfully
- use a hand lens to observe and record biological specimens
- make clear line drawings of specimens
- perform simple calculations, including the magnification (enlargement) of a drawing

Section 2: What will you be tested on?

The Examiners will take account of the following areas in your examination Papers:

- your knowledge (what you remember) and understanding (how you use what you know and apply it to unfamiliar situations)
- how you handle information and solve problems
- your use of experimental skills

These areas of knowledge and skills are called Assessment Objectives. The theory Papers test mainly Assessment Objectives A (knowledge with understanding) and Assessment Objective B (handling information and problem solving). The purpose of the practical Paper is to test Assessment Objective C (experimental skills). Your teacher will be able to give you more information about how each of these is used in the examination Papers.

The table shows you the range of skills you should try to develop:

<i>Skill</i>	<i>What the skill means</i>	<i>What you need to be able to do</i>
A: knowledge with understanding	remembering facts and applying these facts to new situations	<ol style="list-style-type: none">1. use scientific ideas, facts and laws2. know scientific definitions e.g. what is excretion?3. know about biological apparatus and how it works4. know about S I units, quantities (e.g. mass) and symbols (e.g. dm³)5. understand the importance of science in everyday life
B: handling information and problem solving	how you extract information and rearrange it in a sensible pattern and how you carry out calculations and make predictions	<ol style="list-style-type: none">1. select and organize information from graphs, tables and written text2. change information from one form to another, e.g. draw chart and graphs from data3. arrange data and carry out calculations4. identify patterns from information given and draw conclusions5. explain scientific relationships, e.g. changes in heart rate in relation to activity6. make predictions and develop scientific ideas7. solve problems
C: experimental skills	planning and carrying out experiments and recording and analysing information	<ol style="list-style-type: none">1. set up and use apparatus safely2. make observations and measurements and record them3. analyse experimental results and suggest how valid they are4. plan and carry out your own experiment and describe to what extent your plan worked

Section 3: What you need to know.

This is a table, which describes the things you may be tested on in the examination. It is arranged in 14 topic areas. If you are studying only the Core material (Papers 1 and 2), you will need to refer only to the column headed Core material. If you are studying the Extended syllabus (Papers 1 and 3), you will need to refer to both the Core and Extended material columns. If you are unsure about which material to use, you should ask your teacher for advice.

How to use the table

You can use the table throughout your course to check the topic areas you have covered. You can also use it as a revision aid. When you think you have a good knowledge of a topic, you can tick the appropriate box in the checklist column. The main headings in the topic areas are usually followed by the details of what you should know.

Test yourself as follows:

- cover up the details with a piece of paper
- try to remember the details
- when you have remembered the details correctly, put a tick in the appropriate box

If you use a pencil to tick the boxes, you can retest yourself whenever you want by simply rubbing out the ticks. If you are using the table to check the topics you have covered, you can put a tick in the topic column next to the appropriate bullet point.

The column headed 'Comments' can be used:

- to add further information about the details for each bullet point
- to add learning aids
- to highlight areas of difficulty/ things which you need to ask your teacher about

Topic	Core material			Extended material		
	You should be able to:	Checklist	Comments	You should be able to:	Checklist	Comments
Section I.						
1. Features of living organisms	<ul style="list-style-type: none"> • list and describe the features of living organisms state the meaning of the terms: • nutrition • excretion • respiration • growth • movement • reproduction • sensitivity 	<input type="checkbox"/> 				
2.1. The idea and use of a classification system	<ul style="list-style-type: none"> • explain the meaning of and describe the binomial (two name) system of naming species, e.g. <i>Felis leo</i> and <i>Felis tigris</i> • identify and name the five main classes of vertebrates by using visible, external features only 	<input type="checkbox"/> 				

2.2. Adaptations of organisms to their environment	<ul style="list-style-type: none">• list the main, visible, external features used to identify and name the groups, also name examples:• flowering plants (mono- and dicotyledons)• arthropods (insects, arachnids, crustaceans and myriapods)• annelids• nematodes• molluscs	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<ul style="list-style-type: none">• list the main features used to identify and name the groups, also list their adaptation to the environment as appropriate.• viruses• bacteria• fungi	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
3.Simple keys	<ul style="list-style-type: none">• use simple dichotomous (forked) keys that use easily identified features	<input type="checkbox"/>				

Topic	Core Material			Extended Material		
	You should be able to:	Checklist	Comments	You Should be able to:	Checklist	Comments
Section II						
1. Cellular structure of all living organisms	<ul style="list-style-type: none"> • identify the nucleus, cell membrane and cytoplasm in animal and plant cells, e.g. liver and palisade cell • identify also the cell wall, vacuole and chloroplasts in a plant cell, e.g. palisade cell 	<input type="checkbox"/> <input type="checkbox"/>		<ul style="list-style-type: none"> • link the parts of animal and plant cells to their functions 	<input type="checkbox"/>	
2. Level of organisation	<ul style="list-style-type: none"> • explain that a tissue is a group of similar cells having the same function • explain that an organ is built from a number of tissues to carry out a function • explain that an organ system is a number of organs working together • name examples of tissues, organs and organ systems 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>				

<p>3. Size of specimens</p>	<ul style="list-style-type: none"> • understand how the structure of each of the following helps it to carry out its function • ciliated cells in the respiratory tract • root hair cells • xylem vessels • muscle cells • red blood cells • work in millimetres, to measure and calculate the size and magnification of specimens 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>				
<p>4. Movement in and out of cells</p>	<p>4.1 Diffusion</p> <p>explain that diffusion</p> <ul style="list-style-type: none"> • is the movement of molecules • is a random movement • is overall from a higher concentration to a lower concentration – down a concentration gradient 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>				

<p>4.2 Active transport</p>	<ul style="list-style-type: none"> • stops overall when the concentrations are equal <p>explain the importance of the:</p> <ul style="list-style-type: none"> • diffusion of gases e.g. oxygen and carbon dioxide • diffusion of solutes e.g. glucose and nitrates • ability of water, the solvent of living organisms, to form solutions 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<p>understand that active transport</p> <ul style="list-style-type: none"> • is an energy using process • moves substances against a concentration gradient, e.g. nitrates into root hairs, glucose into epithelial cells of villi <p>understand</p> <ul style="list-style-type: none"> • the concept of water potential • that water potential of pure water is higher than that of solutions 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
<p>4.3 Osmosis</p>	<p>explain that osmosis</p> <ul style="list-style-type: none"> • is the movement of water molecules only • involves a partially permeable membrane • occurs overall from a higher 	<input type="checkbox"/> <input type="checkbox"/>			<input type="checkbox"/> <input type="checkbox"/>	

5. Enzymes	concentration to a lower concentration of water	<input type="checkbox"/>				
	<ul style="list-style-type: none"> • stops overall when the concentrations are equal 	<input type="checkbox"/>				
	describe:					
	<ul style="list-style-type: none"> • the role of osmosis in water uptake by plant roots 	<input type="checkbox"/>				
	<ul style="list-style-type: none"> • its effect on plant and animal tissue 	<input type="checkbox"/>				
	<ul style="list-style-type: none"> • explain that a catalyst changes the speed of a reaction 	<input type="checkbox"/>				
	explain that an enzyme					
	<ul style="list-style-type: none"> • is a biological catalyst 	<input type="checkbox"/>				
	<ul style="list-style-type: none"> • is made by cells 	<input type="checkbox"/>				
	<ul style="list-style-type: none"> • is made of protein 	<input type="checkbox"/>				
	<ul style="list-style-type: none"> • speeds up reactions 	<input type="checkbox"/>				
	<ul style="list-style-type: none"> • has optimum working conditions 	<input type="checkbox"/>				
	understand how enzymes are					
	<ul style="list-style-type: none"> • affected by changes of temperature 	<input type="checkbox"/>				
	<ul style="list-style-type: none"> • affected by changes of pH 	<input type="checkbox"/>				
<ul style="list-style-type: none"> • describe the role of enzymes in the germination of seeds 	<input type="checkbox"/>					
understand the uses of enzymes in						
<ul style="list-style-type: none"> • the food industry 	<input type="checkbox"/>					
<ul style="list-style-type: none"> • in biological washing products 	<input type="checkbox"/>					
<ul style="list-style-type: none"> • outline the role of microorganisms and fermenters to manufacture useful enzymes 	<input type="checkbox"/>					

6. Nutrition	<p>explain that nutrition in animals and plants</p> <ul style="list-style-type: none"> • is obtaining organic substances and mineral ions • provides basic materials for growth and repair • provides an organism with sources of energy 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>				
6.1 Nutrients	<ul style="list-style-type: none"> • list the elements that make up carbohydrates, fats and proteins • understand the build up of simple molecules into larger ones such as <ul style="list-style-type: none"> • simple sugars into starch, glycogen • amino acids into proteins • fatty acids and glycerol into fats • describe the test, name the test reagent and state positive result for 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>				

6.2 Photosyn- thesis	<ul style="list-style-type: none"> • starch • reducing sugar • protein • fat <p>state the main sources on the diet and the importance of</p> <ul style="list-style-type: none"> • carbohydrates • fats • proteins • vitamins C and D • mineral salts calcium and iron • fibre (roughage) • water <p>describe the symptoms of a lack in the diet of</p> <ul style="list-style-type: none"> • vitamins C and D • mineral salts calcium and iron <ul style="list-style-type: none"> • state that plants produce simple sugars from raw materials 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<p>describe the use of microorganisms in the food industry manufacturing</p> <ul style="list-style-type: none"> • yoghurt • bread • single cell protein • describe the uses, benefits and health hazards linked to food additives (including colourings) 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
----------------------------	---	--	--	--	--	--

<p>6.2.1 Photosynthesis</p>	<p>state that</p> <ul style="list-style-type: none"> • carbon dioxide and water are raw materials for photosynthesis • simple sugar (glucose) and oxygen are produced • the energy source is light, trapped by chlorophyll and changed to chemical energy • the glucose is changed into other substances e.g. starch, cellulose, protein, fats and oils, for use or storage 	<p><input type="checkbox"/></p> <p><input type="checkbox"/></p> <p><input type="checkbox"/></p> <p><input type="checkbox"/></p>		<ul style="list-style-type: none"> • state that a limiting factor is the factor that sets the overall rate of a process <p>interpret the effects, on photosynthesis, of limiting factors such as</p> <ul style="list-style-type: none"> • light intensity • carbon dioxide concentration <p>explain the use in greenhouse systems of</p> <ul style="list-style-type: none"> • addition of carbon dioxide • optimum light conditions • optimum temperature conditions 	<p><input type="checkbox"/></p> <p><input type="checkbox"/></p> <p><input type="checkbox"/></p> <p><input type="checkbox"/></p> <p><input type="checkbox"/></p> <p><input type="checkbox"/></p>	
<p>6.2.2 Leaf structure</p>	<ul style="list-style-type: none"> • identify in a cross section of a leaf its cell and tissue types and their positions <p>understand the importance of the following features</p> <ul style="list-style-type: none"> • the position and numbers of chloroplasts 	<p><input type="checkbox"/></p> <p><input type="checkbox"/></p>				

6.2.3 Mineral requirements	<ul style="list-style-type: none"> • the stomata, mesophyll and air spaces • the vascular bundles of xylem and phloem <p>describe the role of</p> <ul style="list-style-type: none"> • nitrate ions for protein formation • magnesium ions for chlorophyll formation <p>describe for nitrate fertilisers</p> <ul style="list-style-type: none"> • their uses • the dangers of overuse 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<p>explain the effect on plant growth of a lack of</p> <ul style="list-style-type: none"> • nitrate ions • magnesium ions 	<input type="checkbox"/> <input type="checkbox"/>	
6.3 Animal nutrition	<ul style="list-style-type: none"> • understand that diet is a balance between food intake and the need for energy, growth and health 	<input type="checkbox"/>		<p>consider the problems</p> <ul style="list-style-type: none"> • of world food supplies • that contribute to famine (unequal distribution of food, drought and flooding, and increasing world population) 	<input type="checkbox"/> <input type="checkbox"/>	
6.3.1 Diet	<ul style="list-style-type: none"> • understand the idea of a balanced diet <p>describe</p> <ul style="list-style-type: none"> • a balanced diet linked to the age, sex and activity of a person 	<input type="checkbox"/> <input type="checkbox"/>				

6.3.2 Human alimentary canal	<p>describe the effects of</p> <ul style="list-style-type: none">• malnutrition linked to starvation, coronary heart disease, constipation and obesity• alcohol and the dangers of its misuse <p>identify the organs of the alimentary canal and associated organs</p> <ul style="list-style-type: none">• mouth, oesophagus stomach, small intestine (duodenum, ileum), large intestine (colon, rectum), and anus• pancreas, liver <p>understand that</p> <ul style="list-style-type: none">• ingestion is the intake of food materials into the mouth• digestion is the breakdown of these materials into simple soluble molecules• absorption is the uptake of the soluble molecules into the blood	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>				
------------------------------	--	--	--	--	--	--

6.3.3 Mechanical and physical digestion	• assimilation is the use of the absorbed molecules in the body	<input type="checkbox"/>			
	• egestion is the removal of undigested materials from the anus	<input type="checkbox"/>			
	• describe the roles of the organs above linked to these processes	<input type="checkbox"/>			
	• identify the types of human teeth	<input type="checkbox"/>		• explain the probable action of fluoride in reducing tooth decay	<input type="checkbox"/>
	• describe the functions of each type	<input type="checkbox"/>		• consider arguments for and against its addition to public water systems	<input type="checkbox"/>
	• state the causes of tooth decay	<input type="checkbox"/>			
	• describe the proper care of teeth	<input type="checkbox"/>			
	describe the processes of	<input type="checkbox"/>			
	• chewing	<input type="checkbox"/>			
• peristalsis	<input type="checkbox"/>				

<p>6.3.4 Chemical digestion the significance of producing small, soluble molecules</p>	<ul style="list-style-type: none"> • describe digestion in the alimentary canal describe the functions of typical digestive enzymes listing the substrate and end products for <ul style="list-style-type: none"> • amylase • protease • lipase 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>				
<p>6.3.5 Absorption</p>	<ul style="list-style-type: none"> • state that the small intestine is the organ for absorption of digested food • describe the importance of villi in increasing its internal surface area 	<input type="checkbox"/> <input type="checkbox"/>		<ul style="list-style-type: none"> • describe the structure of a villus (including capillaries and lacteal) • state the role of the hepatic portal vein in transport of absorbed molecules to the liver 	<input type="checkbox"/> <input type="checkbox"/>	
<p>6.3.6 Assimilation</p>	<p>describe the role of the liver in the</p> <ul style="list-style-type: none"> • metabolism of glucose • destruction of excess amino acids • describe the role of fat as a storage substance 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<p>understand that deamination involves</p> <ul style="list-style-type: none"> • the removal of the nitrogen containing part of amino acids as urea • and the release of energy from the remainder of the amino acid 	<input type="checkbox"/> <input type="checkbox"/>	

7. Transport						
7.1 Transport in plants						
7.1.1 Water uptake	<ul style="list-style-type: none"> • identify a microscope view of root hair cells • describe their functions 	<input type="checkbox"/> <input type="checkbox"/>				
7.1.2 Transpiration	<p>understand that transpiration</p> <ul style="list-style-type: none"> • is the loss of water vapour from stomata • occurs by diffusion <p>describe</p> <ul style="list-style-type: none"> • how water vapour loss is linked to cell surfaces, air spaces and stomata • the effects of changes in temperature, humidity and light intensity on transpiration • how wilting occurs 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<ul style="list-style-type: none"> • describe the mechanism of water uptake in terms of “pull” from above • describe that this creates a water potential gradient through a plant • describe the adaptations of leaf stem and root to different environments (relate to local examples) 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
7.1.3 Translocation	<p>understand that translocation</p> <ul style="list-style-type: none"> • is the movement of soluble molecules e.g. sucrose and 	<input type="checkbox"/>		<ul style="list-style-type: none"> • describe translocation of applied chemicals (including systemic pesticides) throughout a plant 	<input type="checkbox"/>	

7.2 Transport in humans	amino acids • occurs from regions of production or storage (supply) to regions of use in respiration and growth (demand)	<input type="checkbox"/>				
7.2.1 Heart	describe the • gross structure of the heart • functioning of the heart • effect of exercise on heart beat • list the likely causes of a heart attack (diet, smoking, stress) and preventative measures	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>				
7.2.2 Arteries, veins and capillaries	describe the structure and functions of • arteries • veins • capillaries	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		describe how structure and function are linked in • arteries • veins • capillaries	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	

7.2.3 Blood	<ul style="list-style-type: none"> • identify a microscope view of blood cells <p>describe the</p> <ul style="list-style-type: none"> • components of blood • the functions of blood (including clotting but not details of the process) • transfer of materials between capillaries and tissue fluid 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<p>describe the immune system in terms of</p> <ul style="list-style-type: none"> • antibody production • tissue rejection • phagocytosis • describe the process of clotting (only fibrinogen to fibrin) <p>describe the function of the lymphatic system in the</p> <ul style="list-style-type: none"> • circulation of body fluids • production of lymphocytes 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
8. Respiration	<ul style="list-style-type: none"> • understand respiration is the release of energy from food substances in all living cells 	<input type="checkbox"/>				
8.1 Aerobic respiration	<ul style="list-style-type: none"> • understand aerobic respiration is the release of energy from food substances in all living cells using oxygen 	<input type="checkbox"/>				

<p>8.2 Anaerobic respiration</p>	<ul style="list-style-type: none"> • state the equation for aerobic respiration (in words or symbols) <input type="checkbox"/> • name and describe the uses of energy in the human body <input type="checkbox"/> • understand anaerobic respiration is the release of energy from food substances in all living cells without oxygen <input type="checkbox"/> state the equation for anaerobic respiration (in words or symbols) for • muscles <input type="checkbox"/> • yeast <input type="checkbox"/> describe its role • in brewing <input type="checkbox"/> • in bread making <input type="checkbox"/> • the production of lactic acid in muscles during exercise <input type="checkbox"/> • compare the relative amounts of energy released in aerobic and anaerobic respiration <input type="checkbox"/> 					
<p>8.3 Gaseous exchange</p>	<ul style="list-style-type: none"> • list the features of gaseous exchange surfaces in animals <input type="checkbox"/> • state the differences in 			<p>describe the role in the ventilation of the lungs of the following structures</p>		

9 Excretion in humans	<p>composition between inspired and expired air</p> <ul style="list-style-type: none">• describe a test for carbon dioxide <p>describe the effects of</p> <ul style="list-style-type: none">• physical activity on rate and depth of breathing• tobacco smoke and its major toxic components on the respiratory system <ul style="list-style-type: none">• understand excretion is the removal, from the body, of toxic materials, waste products of metabolism and substances in excess of an organisms needs <p>describe the function of the kidney simply in terms of the</p> <ul style="list-style-type: none">• removal of urea and excess water• reabsorption of glucose and some salts <p>describe the</p> <ul style="list-style-type: none">• relative positions of the ureters, bladder and urethra in the body• formation of urea by the liver	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<ul style="list-style-type: none">• ribs• internal and external intercostal muscles• diaphragm <ul style="list-style-type: none">• explain dialysis• consider its application in kidney machines• consider the advantages and disadvantages of kidney transplants compared with dialysis	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
-----------------------	---	--	--	---	--	--

	<ul style="list-style-type: none"> • breakdown of alcohol, drugs and hormones by the liver 	<input type="checkbox"/>				
<p>10. Coordination and response</p>	<ul style="list-style-type: none"> • understand that coordination is the ability to detect and respond to internal and external stimuli 	<input type="checkbox"/>				
<p>10.1 Hormones</p>	<p>understand that a hormone</p> <ul style="list-style-type: none"> • is a chemical substance produced by a gland • is carried by the blood plasma • has an effect (causes a response) on a target organ • describe the chemical control of metabolic activity by adrenaline 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<p>describe the</p> <ul style="list-style-type: none"> • chemical control of plant growth by auxins • the effects of synthetic plant hormones used as weedkillers • consider the use of hormones in food production 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
<p>10.2 Tropic and taxic responses</p>	<ul style="list-style-type: none"> • understand geotropism is a growth response towards or away from the stimulus of gravity, by a plant • understand phototropism is a growth response towards or away from the stimulus of light, by a plant 	<input type="checkbox"/> <input type="checkbox"/>		<p>describe in terms of auxins regulating differential growth</p> <ul style="list-style-type: none"> • geotropism • phototropism 	<input type="checkbox"/> <input type="checkbox"/>	

10.4 Homeostasis	<ul style="list-style-type: none"> • understand that a reflex action as a way of linking stimuli with coordinated responses <input type="checkbox"/> describe the <ul style="list-style-type: none"> • structure of the eye <input type="checkbox"/> • functioning of the eye (including accommodation and pupil reflex) <input type="checkbox"/> • compare nervous and hormonal control systems <input type="checkbox"/> • understand that homeostasis is the maintenance of a constant internal environment <input type="checkbox"/> • describe temperature regulation <input type="checkbox"/> explain the effects of <ul style="list-style-type: none"> • sweating <input type="checkbox"/> • vasodilation <input type="checkbox"/> • vasoconstriction <input type="checkbox"/> 			<ul style="list-style-type: none"> • understand the difference between voluntary and involuntary actions <input type="checkbox"/> understand the difference between rod and cone cells linked to their <ul style="list-style-type: none"> • function <input type="checkbox"/> • distribution <input type="checkbox"/> describe the control of glucose content of the blood by <ul style="list-style-type: none"> • the liver <input type="checkbox"/> • insulin and glucagon from the pancreas <input type="checkbox"/> • consider the general role of negative feedback in homeostasis <input type="checkbox"/> 		
10.5 Drugs	<ul style="list-style-type: none"> describe the effects and dangers of misuse of <ul style="list-style-type: none"> • alcohol <input type="checkbox"/> • heroin <input type="checkbox"/> • describe the personal and social problems caused by drug abuse of alcohol and heroin <input type="checkbox"/>

Section 4: Appendices

4.1 The mathematical skills you need

This is a checklist of the mathematical skills you need for your Biology examination. You should tick each box in the checklist when you know that you have learned the skill. Ask your teacher to explain any skill you are unsure about. The 'Comments' column is for extra notes and examples.

You can use a calculator for all the examination Papers. If your calculator is one that can be programmed, you should make sure that any information in it is removed before the examination.

<i>You should be able:</i>	<i>Checklist</i>	<i>Comments</i>
<ul style="list-style-type: none">• add, subtract, multiply and divide	<input type="checkbox"/>	
Use: <ul style="list-style-type: none">• averages• decimals• fractions• percentages• ratios• reciprocals	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
<ul style="list-style-type: none">• recognise standard notation (notation is putting symbols for numbers e.g. $x = 2$, $y = 5$, atomic mass, $Z = 12$)• use standard notation	<input type="checkbox"/> <input type="checkbox"/>	
<ul style="list-style-type: none">• use direct proportion (stepwise increases)• use inverse proportion (inverse means turned up side down)	<input type="checkbox"/> <input type="checkbox"/>	the inverse of 4 is $\frac{1}{4}$ (= 0.25)
<ul style="list-style-type: none">• use numbers to the 'power of 10' e.g. $1 \times 10^2 = 100$	<input type="checkbox"/>	Your calculator will often show number to the power of 10 when you do calculations. Do not worry too much though – your calculator does the work for you.
<ul style="list-style-type: none">• draw charts		You will be given the data

<ul style="list-style-type: none"> • graphs with line of best fit 	<input type="checkbox"/> <input type="checkbox"/>	
<p>interpret:</p> <ul style="list-style-type: none"> • bar graphs • pie charts • line graphs 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
<ul style="list-style-type: none"> • select suitable scales and axes for graphs 	<input type="checkbox"/>	
<ul style="list-style-type: none"> • make approximations 	<input type="checkbox"/>	
<p>use the formulas:</p> <ul style="list-style-type: none"> • area = length x width • volume = length x width x height • use and convert metric units into one another 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<p>e.g. 100cm = 1 m 1000g = 1 kg</p>
<ul style="list-style-type: none"> • use mathematical an measuring instruments e.g. ruler, compasses, protractor 	<input type="checkbox"/>	
<p>understand the meaning of :</p> <ul style="list-style-type: none"> • radius • diameter • square • rectangle 	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	

4.2 Other important information you need for your Biology Examination

The terms used in Biology examination Papers are given in the sections that follow. It is very important that you know and understand all of them before you take your examination. You should ask your teacher to explain anything that you are unsure about.

4.2.1. Numbers

The decimal point will be placed on the line, e.g. 52.35.

Numbers from 1000 to 9999 will be printed without commas or spaces.

Numbers greater than or equal to 10 000 will be printed without commas. A space will be left between each group of three whole numbers, e.g. 4 256 789.

4.2.2 Units

The International System of units will be used (SI units). Units will be indicated in the singular not in the plural, e.g. 28 kg.

(a) **SI units commonly used in Biology are listed below.**

N.B. Care should be taken in the use of *mass* and *weight*. In most biological contexts, the term mass is correct, e.g. dry mass, biomass.

<i>Quantity</i>	<i>Name of unit</i>	<i>Symbol for unit</i>
length	kilometre	km
	metre	m
	centimetre	cm
	millimetre	mm
	micrometer	µm
mass	tonne (1000 kg)	(no symbol)
	kilogram	kg
	gram	g
	milligram	mg
	microgram	µg
time	year	y
	day	d
	hour	h
	minute	min
	second	s
amount of substance	mole	mol

(b) **Derived SI units are listed below.**

energy	kilojoule	kJ
	joule	J
	(calorie is obsolete)	

(c) **Recommended units for area, volume and density are listed below.**

area	hectare = 10^4 m^2	ha
	square metre	m^2
	square decimetre	dm^2
	square centimetre	cm^2
	square millimetre	mm^2
volume	cubic kilometre	km^3
	cubic metre	m^3
	cubic decimetre (preferred to litre)	dm^3
	litre	dm^3 (not l)
	cubic centimetre	cm^3 (not ml)
	cubic millimetre	mm^3
density	kilogram per cubic metre	or kg m^{-3}
	gram per cubic centimetre	or g cm^{-3}

(d) **Use of Solidus**

The solidus (/) will **not** be used for a quotient, e.g. m / s for metres per second.

4.2.3. Presentation of data

The solidus (/) is to be used for separating the quantity and the unit in tables, graphs and charts, e.g. time/s for time in seconds.

(a) **Tables**

- (i) Each column of a table will be headed with the physical quantity and the appropriate unit, e.g. time / s.

There are three acceptable methods of stating units, e.g. metres per sec or m per s or

m s^{-1} .

- (ii) The column headings of the table can then be directly transferred to the axes of a constructed graph.

(b) **Graphs**

- (i) The independent variable should be plotted on the x-axis (horizontal axis) and the dependent variable plotted on the y-axis (vertical axis).

- (ii) Each axis will be labelled with the physical quantity and the appropriate unit, e.g. time / s.

- (iii) The graph is the whole diagrammatic presentation. It may have one or several curves plotted on it.

- (iv) Curves and lines joining points on the graph should be referred to as 'curves'.

- (v) Points on the curve should be clearly marked as crosses (x) or encircle dots (). If a further curve is included, vertical crosses (+) may be used to mark the points.

(c) **Pie Charts**

These should be drawn with the sectors in rank order, largest first, beginning at 'noon' and proceeding clockwise. Pie Charts should preferably contain no more than six sectors.

(d) **Bar Charts**

These are drawn when one of the variables is not numerical, e.g. percentage of vitamin C in different fruits. They should be made up of narrow blocks of equal width that do **not** touch.

(e) **Column Graphs**

These are drawn when plotting frequency graphs from discrete data, e.g. frequency of occurrence of leaves with different numbers of prickles or pods with different numbers of seeds. They should be made up of narrow blocks of equal width that do **not** touch.

(f) **Histograms**

These are drawn when plotting frequency graphs with continuous data, e.g., frequency of occurrence of leaves of different lengths. The blocks should be drawn in order of increasing or decreasing magnitude and they **should** be touching.

4.2.4 Taxonomy

Taxonomy is the study of the principles of the organisation of taxa into hierarchies. There are seven levels of taxon - kingdom, phylum, class, order, family, genus and species. These may be used when teaching the concept and use of a classificatory system, the variety of organisms, and the binomial system. The following should apply:

(a) Five Kingdoms are now recognised as

prokaryotes	(Prokaryotae), including bacteria and blue-green bacteria
protocists	(Protoctista), including green, red and brown algae and protozoans
fungi	(Fungi)
plants	(Plantae)
animals	(Animalia)

The viruses cannot be fitted into this classificatory system.

- (b) The binomial system of naming gives each organism a two-word name. The first word is the generic name and the second word is the trivial name, e.g. *Homo sapiens*. The trivial name should never be used by itself.
- (c) Generic and trivial names are distinguished from the rest of the text either by underlining (when written or typed) or by being set in italics (in print).
- (d) The generic name always takes an initial capital letter. It can be accepted as a shorthand for the species name where the intent is obvious, e.g. *Plasmodium*, and in these circumstances can stand alone.
- (e) The common name should not normally be written with an initial capital letter, e.g. cat and dog. The exception is Man, where it is the common name for a species where the two sexes are distinguished by the terms man and woman.
- (f) A species is not easy to define but an acceptable general definition is as follows.
'A group of organisms capable of interbreeding and producing fertile offspring.'

4.2.5. Genetics

(a) The terms *gene* and *allele* are not synonymous.

A gene is a specific length of DNA occupying a position called a locus. A specific function can be assigned to each gene. An allele is one of two or more different forms of a gene.

- (b) A standard form of presenting genetic crosses should be adopted. The following symbols should be used as shown.
- P designates the cross of pure-breeding (homozygous) individuals.
 F₁ designates the offspring of homozygous parents.
 F₂ designates the offspring produced by crossing F₁ parents.
- (c) The format for the course of a genetic cross should be labelled as shown.
- parental phenotypes
 parental genotypes
 gametes
 offspring genotypes
 offspring phenotypes
 etc.
- (d) The gene should be designated by a letter or letters so that upper and lower case versions are easily distinguishable, e.g. B and b. The upper case letter indicates the dominant allele and the lower case letter indicates the recessive allele.
- (e) The symbols for gametes should be circled to indicate the discrete nature of each gamete.
- (f) Some form of checkerboard should be used to demonstrate genotypes that can result from random fusion of gametes. Students should understand that genotypes are only possible combinations and that only a very large number of offspring can result in all combinations being achieved.
- (g) The term *incomplete dominance* should be discontinued and in the particular case where alleles are equally dominant it should be called *codominance*. Thus codominance should be used where the influence of both alleles is shown in the phenotype, e.g. the AB blood group in humans.

4.2.6 Terminology

- (a) Wherever possible, English terms should be used in preference to Latin or Greek terms, e.g. the term red blood cell should be used and **not** erythrocyte.
- (b) Generalised terms should be stated in English, e.g. small intestine.
- (c) Where no suitable English terms exist, latinised terms are unavoidable and will need to be used, e.g. atrium, bronchi, villi.

4.3 Command words and phrases used in Biology examination papers

Examiners use command words to help you to understand what they are looking for in your answer. This table explains what each of these words or phrases means and will help you to understand the kind of answer you should write. The list of command words is in alphabetical order. You should remember that the meaning of a term may vary slightly according to how the question is worded.

Calculate	A numerical answer is needed. You should show any working, especially when there are two or more steps in a calculation. You should always include relevant units or symbols. <i>e.g. calculate the magnification of a specimen</i>
Deduce	This is used in a similar way to <i>predict</i> , except you will need to support your answer with a statement e.g. referring to a principle, or theory, or including reasoning with your prediction.

Define	You need to state the meaning of something <i>e.g. respiration is the release of energy from food substances in living cells</i>
Describe	You need to state the main points about something (using labelled diagrams if this helps you). <i>e.g. describe the parts played by the liver and the pancreas in the digestion of fats</i> You may also be asked to describe a particular process <i>e.g. describe how the pollination of a flower is brought about by insects</i> You may be asked to describe how to do a particular experiment <i>e.g. describe how you can test a food for starch and simple sugar</i>
Determine	This often indicates that the quantity cannot be directly measured but has to be found by calculation. <i>e.g. Determine the amount of protein needed in a particular diet.</i>
Discuss	You have to write down points for and against an argument <i>e.g. discuss points for and against the use nitrogen fertilisers</i>
Estimate	You need to work out an approximate value for a quantity, based on your knowledge of theory and the information provided. <i>e.g. estimate the amount of energy needed by an office worker in a day.</i>
Explain	You may have to give reasons or refer to a theory depending on the context of the question. <i>e.g. explain why the rate of transpiration changes with changes in light intensity</i>
Find	This is a general term which can mean several similar things, such as calculate, measure, determine etc.
Give a reason / reasons	See 'Explain'
List	Write down a number of separate points. Where the number of points is stated in the question, you should not write more than this number. <i>e.g. list three features of insect-pollinated flowers</i>
Meant (what is meant by the term...)	See 'Understand'
Measure	You are expected to find a quantity by using a measuring instrument <i>e.g. length (by using a ruler), volume (by using a measuring cylinder)</i>
Outline	State the main points briefly <i>e.g. outline the process of the water cycle</i>
Predict	This may be used in two ways: (i) You find the answer by working out the patterns in the information provided and drawing logical conclusions from this. <i>e.g. predict the effect of the death of an organism in a food web on the populations of other food web members</i> (ii) You may need to use information from tables and graphs or do calculations. <i>e.g. predict the optimum temperature for lipase</i>
Sketch	(i) When drawing graphs, this means that you may draw the approximate shape and/or position of the graph BUT you need to make sure that any important details, such as the line passing through the origin or finishing at a certain point, are drawn

	<p>accurately.</p> <p>(ii) When drawing a specimen or other diagrams, a simple line drawing is all that is needed, but you must make sure the proportions are correct and the most important details are shown. You should always remember to label your diagrams.</p>
State	<p>You should give a short answer without going into any detail, e.g. state the name of the mineral needed to make chlorophyll BUT, remember that 'state the meaning of...' is different. It is more like 'understand'.</p>
Suggest	<p>This may be used in two ways:</p> <p>(i) There may be more than one correct answer to the question. e.g. suggest two reasons why a plant's seeds should be widely dispersed</p> <p>(ii) You are being asked to apply your general knowledge of biology or reasoning skills to a topic area that is not directly on the syllabus e.g. applying ideas about competition and feeding relationships to a unfamiliar food web</p>
Understand (what do you understand by the term..)	<p>You should (i) define something and (ii) make a more detailed comment about it. The amount of detail depends on the number of marks awarded. e.g. what do you understand by the term digestion</p>
